

There are five things all mammals have in common.

How many can you remember?

- 1.
- 2.
- 3.
- 4.
- 5.

Plants on land use their roots get nutrients from the soil. Phytoplankton are at the surface of the water, and don't have roots! Draw a picture to show how they get their nutrients.

Some whales eat plankton. So do fish and jellyfish. Other whales, larger fish, birds and mammals (like seals and polar bears) eat the smaller fish and jelly fish. Draw a picture of a little fish eating plankton and then a bigger fish or animal trying to eat the little fish.
