

Be A Whale Scientist

Can you be a whale scientist?

Match the whales in this book to the whale images and write the correct whale's name above their picture.

1. Whale's name: PORTER

This whale seemed to enjoy traveling and exploring; He has been seen in northern Norway and North America! The white scar on his back makes his easy to identify. This whale was first sighted in 1981.

6. Whale's name: CALVIN

Born in 1992 to Delilah. This whale has a distinct scar across her back as well as scar across her flukes. She has given birth to 4 calves. Her first calf, born in 2005, was named Hobbes after the comic strip Calvin and Hobbes. She gave birth to her 4th calf in February 2020.

5. Whale's name: RUFFIAN

This whale has survived multiple entanglements in fishing gear and has many scars because of it. You can watch a video of him being disentangled by scientists at:

2. Whale's name: MOGUL

This whale made the news in 2019 when he was seen off the coast of France and Iceland having swam there from the East Coast of the United States. He is identified by the callosity pattern on his head, which looks like bumps you might go over on a ski slope.

3. Whale's name: FIDDLE

The name of this whale is another word for "violin". He has white spots and scars on his back and enjoys searching for food in the Bay of Fundy and Cape Cod Bay, but also likes the Gulf of Maine.

4. Whale's name: CHURCHILL

This whale became famous all over the world after scientists made several attempts to free him from entanglement in fishing gear which left scars on his mouth, flukes and blowhole. Sadly, scientists were not able to completely free him from the fishing gear. He was last seen in 2001.
